

**Amendments to the Abstract:**

Please replace the abstract with the following amended abstract:

[-] A Process and device for displacing a moveable unit on a base.

[- According to the invention]The process includes:

- a) a force (F) is determined which, applied to the moveable unit (4), produces a combined effect, on the one hand, on the moveable unit (4) so that it exactly carries out the envisaged displacement on the base (2), especially as regards the prescribed duration and prescribed distance of the displacement, and, on the other hand, on the elements (MA1, MA2, MA3, 4) brought into motion by this displacement so that all these elements are immobile at the end of said displacement of the moveable unit (4);  
and
- b) the force (F) thus determined is applied to the moveable unit (4).
